

WE had the opportunity to experiment and investigate the reaction that occurs when you combine baking soda and vinegar together. We observed as it fizzed and formed lot and lots of bubbles. Next we carried out an experiment to see if the gas that's produced could blow up our balloon. We were totally amazed it was like magic. We then looked at the stages and were able to sequence the steps taken. Fun in the nursery garden as we built our very own den. It even had a cooker. Some children expressed a wish to go camping. Joining with our peers for a BOO ZOO math's story which then resulted in a shape hunt in the nursery garden.
