

This week we had a visit to the harbour for a talk with the Assistant Harbour Master, who told us all about his role within our community and how a working harbour. We got to see some cool equipment like creels and a GPS device that allowed us to look up our position and transfer the grid reference onto the new stickers for the life jackets along the pier. We were also shown how to use the walkie talkies and were able to chat with the fish farm workers who were on the fish farm barge. When we returned to school we incorporated some of the information we learned into our role play area, life jackets to keep us safe, making our own boat registrations, we played lots of number games to help with our number recognition and even bought and sold our catch enabling us to pay our harbour dues! We also made our very own tasty fish themed snack. Lovely cream cheese fish wraps where we had to choose which vegetables we'd like to decorated them.
