

This week afforded us with opportunities to get outside and experience the differencing weather within our local community. We investigated the ice and snow by cracking the ice in the puddles. It was very tricky to catch a snowflake with our tongue during some snowfall. At the beach we built a birds nest using some seaweed and large stones as eggs that we collected. Back at school we really enjoyed learning the birdie dance this week as we tweeted and shook our tail feathers before watching & following along to make some bird quackers from a straw on an online tutorial. We took these out on a bird call adventure to hear the birds respond to our quacks with beautiful birdsong. We discussed why the birds might be finding it difficult to find food and set about assembling and constructing our new bird feeder and bird bath for the nursery garden. Once filling up with goodies for our feathered friends, we set about recording daily the amount of seed/meal worms left in the feeders before we need to refill. Continuing with digital technologies this week seen us take a trip out of school to take part in an animation project at Campbeltown Picture House.
